

Dear doctor,

I am interested in carrying out a cancer detection and chemosensitivity test and would like to learn more about the tests offered by RGCC.

RGCC's team of scientists are leading experts in the field of cancer genetics. They have been working with GPs and doctors all over the world since 2004 to provide the most up-to-date cancer detection and chemosensitivity tests available.

Working from world-class facilities in Europe, they aim to detect any potential early signs of cancer, monitor any existing cancers and produce a personalised profile of chemotherapy drugs and natural treatments that could benefit individual patients.

All of their tests are carried out at ISO-accredited laboratories, which are equipped with the latest technology and specialised software for data analysis.

You can learn more about RGCC's range of tests and services at www.rgcc-group.com

Yours sincerely,
